

## US Perspective | What Exists Today in AI Regs and POV?

While the United States' had not passed a flagship legislative AI initiative, they have taken action to provide structure & resources

- Congress has tread carefully in regulating private sector use of AI. **Rather than impose new laws dictating how companies employ AI, Congress has focused on increasing government investment in AI research** and developing the federal government's own capacity to utilize AI tools responsibly
- **Bipartisan legislation has rallied around ethical principles like reducing bias and respecting privacy** without prescribing exactly how companies should apply them
- **CONSEQUENCES:**
  - Constraints - Without laws that grant agencies new authorities, **agencies must rely on reinterpretations of existing policies** to regulate the use of AI
  - Freedoms - Agencies can regulate industry AI use within their existing authority and **gives them latitude to determine appropriate AI applications**

### Proposed Legislation To Date

1. [National AI Initiative of 2020](#)
2. [AI in Government Act of 2020](#)
3. [AI Training for the Acquisition Workforce Act of 2022](#)
4. [Algorithmic Accountability Act of 2022](#)
5. [CREATE AI Act of 2023](#)
