

STRENGTH IN NUMBERS

The Child Health PSO has spent the last 16 years refining a shared learning framework to help make pediatric care safer.

By examining 2,800 events, issuing 4,253 early warnings, and convening 200+ case learning events, the PSO has helped hospitals reduce severe harm year after year across the U.S. In 2025, its collective impact grew.

42

safety huddles held

Last year, we reached record member engagement.

We released a new national safety resource, developed a family engagement workgroup, and continued enhancing our risk management software to optimize case learning. That work unfolded alongside **42 safety huddles, 14 safe tables, 326 case submissions**, and the Annual Meeting — the core activities of our PSO that turn individual experiences into collective wisdom.

The new resource, called the Safety Watch, is based on member-reported cases and helps pediatric clinicians and organizations in any setting stay ahead of harm by proactively identifying risks. The newly established Patient and Family Engagement workgroup will formally integrate family perspectives into PSO work.

Together, these efforts reflect 58 children's hospitals' dedication to eliminating pediatric harm through transparent, peer-to-peer learning. Thank you all for your essential engagement. Every case told, every trend identified, and every risk elevated makes care safer for the next child at every hospital and clinic in the U.S.

*There are 100+ federally registered PSOs.
Only **one** is focused solely on children.*

UNPARELLED VALUE

MEASURABLE IMPACT

SSERs decreased by more than half since data collection started in 2011.

REAL-TIME ADVICE

66% of help requests in the weekly huddles received a response.

REPLICABLE ACTION PLANS

62% of action items were classified as intermediate or stronger based on the IHI Action Hierarchy Tool.

CHILD HEALTH IMPROVEMENT

Our Top Pediatric Safety Issues of 2025 highlights the most pressing risks, sharing the PSOs singular insights broadly.
